Traffic Collision Statistics

Table 11.1 is a detailed summary of all provincial highways in Saskatchewan. The length of each section of highway, along with the average daily traffic (ADT) on that section, is used to calculate travel (kilometres in millions) and a collision rate (collisions per million vehicle kilometres) for each section.

Tables 11.2 and 11.3 summarize collisions by community, and Table 11.8 shows a similar summary by rural municipality. Collision rates are calculated based on populations, as well as travel, where applicable.

2024 Quick Facts:

- The collision rate for all provincial highways is 0.93 collisions per million vehicle kilometres (Mvkm).
- The average number of collisions per 100 people for communities with a population:
 - of 5,000 more is 1.38
 - of 250 to 5,000 is 0.36
 - under 250 is 0.20
- Regina and Saskatoon combined account for 45% of the province's population and 44% of the collisions.
- Regina recorded 5,026 collisions, 981 injuries and four deaths in 2024.
- Saskatoon recorded 8,356 collisions, 1,585 injuries and nine deaths in 2024.
- The collision rate for all rural municipalities is 3.59 collisions per 100 people and 1.30 collisions per million vehicle kilometres.

TAIS provides each city's municipal engineering department with collision data specific to their city. This data, mostly in electronic form, enables each city to do a much more detailed analysis of their collisions. Many of them, in turn, summarize and publish their own collision statistics and internal analysis.

Additional information specific to any city may be obtained by contacting their respective engineering department. A listing of contacts for some of the cities is provided below.

Estevan	Mr. Greg Wock	306-634-1823
